SUPPLEMENTAL REQUEST FOR RECONSIDERATION

ASSISTANT COMMISSIONER FOR PATENTS
WASHINGTON, D.C. 20231

SIR:

Further to the Request for Reconsideration of May 29, 2001, Applicants provide herewith a copy of a facsimile received on May 29, 2001, from Galephar P.R. Inc.

Unfortunately, this facsimile was not received in sufficient time to incorporate the same into the filing of May 29, 2001.

Nevertheless, the facsimile (identified as attachment 16) provides a copy, executed by two co-inventors Francis Vanderbist and Phillippe Baudier, of a description of the

contributions of each of Francis Vanderbist, Phillippe Baudier and Paul Maes to the work leading up to the present invention.

In view of the Request for Reconsideration of May 29, 2001, and the above, including the sixteen (16) attachments of record, providing clear evidence that Mr. Paul Maes refuses to execute the Declaration for this case, Applicants earnestly urge that this application be accepted for further national stage processing.

Favorable consideration is earnestly solicited.

Respectfully submitted,

OBLON, SPIVAK, McCLELLAND,
MAIER & NEUSTADT, P.C.

**Laboratoires S.M.B. S.A.****AN INTEGRATED PHARMACEUTICAL COMPANY**

**"DRY POWDER INHALER EXCIPIENT. PROCESS FOR
IT PREPARATION AND PHARMACEUTICAL
COMPOSITIONS CONTAINING IT"**

INVENTION PROCESS

The Patent (WO 98/50015) "Dry Powder Inhaler Excipient, Process for its preparation and Pharmaceutical compositions containing it" was invented by Francis Vanderbist, Paul Maes and Philippe Baudier.

Francis Vanderbist, Industrial Pharmacist employee of SMB and Project Manager had made the hypothesis that the roller dried lactose could be of interest as a carrier for Dry Powder Inhalation hoping that it could provide for increased stability of active drugs.

During a regular research and development meeting Francis Vanderbist reported this idea to Mr. Paul Maes, R & D Director and his direct supervisor at that time and to Mr. Philippe Baudier, Managing Director. The three present at that meeting concluded to go forward with the concept and decided to further meet on a regular basis and to assign to Francis Vanderbist the Laboratory work.

Brain storming meetings took place on a regular basis for the purpose of transforming the concept to useful medical application. Mr. Philippe Baudier principal collaboration was to select the useful areas of research by defining the active chemical entities of commercial and medical interest and by providing the necessary funding. Mr. Paul Maes, principal collaboration was to assure that the experiments performed were scientifically sound and that the work was performed on a timely basis.

After full collaboration on this project for about 3 years, a patent application was written in collaboration by the three inventors.

We, Francis Vanderbist and Philippe Baudier, declare that the patent "Dry Powder Inhaler Excipient, Process for its preparation and Pharmaceutical compositions containing it" listed in the PCT application PCT/BX98100064 was originated from the collaborative work of the three inventors Francis Vanderbist, Paul Maes and Philippe Baudier.
